

# Lincoln Financial Field

PHILADELPHIA, PA.

► Known as the first home to the Philadelphia Eagles National Football League team from 1971 to 2002, Veterans Stadium began to show signs of deterioration and required modern amenities. Construction began in the spring of 2001 to replace the aging stadium with a new venue known as Lincoln Financial Field. The new facility was designed to provide modern services for fans and more luxury and wheelchair accessible seating.

Madison Construction placed nearly 66,000 cubic yards of concrete for this project. The main concourse level of the stadium consisted of 275,000 square feet of slab and beam structural concrete frame construction, which was placed approximately 24 feet above ground level.

The new stadium blends Philadelphia's history with a contemporary new design, incorporating three open corner plazas with views into and out

of the seating bowl. Additional features include an entertainment building with sports bar, team store and hall of fame, and a signature head-house tower and "Eagles Nest" balcony. The innovative design of Lincoln Financial Field provides a new experience for fans. Construction was completed in the summer of 2003.

**OWNER:** Philadelphia Eagles

**GENERAL CONTRACTOR:** Turner/Keating/  
McKissack JV

**OTHER TEAM MEMBERS:** ReSteel Supply,  
PERI Formwork, AmQuip Cranes, Bayshore  
Rebar, Action Concrete

**COMPLETION DATE:** Summer 2003

**SERVICES PROVIDED:**

- Structural Concrete Frame construction
- Pile-supported foundations
- Elevated slabs on metal deck
